

Celebrating Ringo's Progress

Osteoarthritis & Weak Hindlimb

CASE BACKGROUND

Ringo is a 14-year-old dog carrying more than just years, he was carrying real pain.

Diagnosed with osteoarthritis and progressive hindlimb weakness, Ringo's days had grown shorter: shorter walks and shorter bursts of energy. But even through all of that, he had the will to move.

RINGO'S TREATMENT PLAN

Gym

Shockwave

Laser

Hydrotherapy

From Setback to Comeback

Rehabilitation, Physical Therapy, and Weight Loss

Encouraging Progress

- Improved strength
- Decreased back pain
- Walking longer distances

A Difficult Stretch

- Reduced mobility
- Leaning to the left
- Plan adjustment

Back on Track

- No limping
- Moderate back pain
- Improved balance and weight-bearing

Holding Strong

- Alert and mobile
- Well-balanced
- Improved strength and coordination

RINGO'S GOALS

1. Improve comfort & mobility
2. Inflammation control for the hips, knees, and ankles
3. Muscle strengthening in the hind legs
4. Improve stamina and mobility
5. Weight loss

RINGO'S OUTCOME

Today, Ringo is walking with more ease and enjoying his days with far less pain. He even gallops at his favorite park.

Ringo works hard to retain his strength, and every session, walk, and wag of his tail is proof that it's worth it.

Ringo's story is a reminder that progress, no matter how big or small, is worth celebrating!

Recovery is rarely a straight line. Ringo's progress is a journey, and not one that is always predictable.

Rehabilitation doesn't happen only in the clinic. It happens between sessions, at home, and out in the world.
